THE NEW HOT AIR FURNACES

Now in Full Operation at the Office of Messrs. Kidder & Co., corner of Dearborn and Monroe-sts., and at the residence of the inventor, 1045 Indiana-av. This new plan, the only one that has ever been successfully applied to a Hot Air Furnace, is the result of many years' experience and study. Its principal features are: A Combustion Chamber, in which the gases are consumed before entering the flues; a Radiating Chamber, which receives the heat from the Combustion Chamber, and a Mixing Chamber, which mixes the heated air with the cold air before it enters the room. Every Furnace is guaranteed to heat the house to which it is applied, and to do it with less fuel than any other Furnace in use. Call and see it in operation, or send for a circular.
